Eruptions and earthquakes may happen here again.

100,000 years ago volcanoes erupted west of here. Even today, volcanoes, earthquakes and erosion work together to shape this spectacular landscape.

Lava flows dammed the Colorado River. Volcanoes, like this one, sent lava flows cascading into Grand Canyon.

Imagine viewing an eruption! Pottery fragments have been found in 1,000-year-old lava flows suggesting that people witnessed these eruptions.

Find the locations of recent Grand Canyon earthquakes. Earthquakes recorded in the last 20 years.
